## Test results - organoleptic properties

### Test methods

Sensory analysis - scoring method (6 assessors) according to DIN 10955 (odor and flavor). Test performed by an ISO/IEC 17025 accredited external service provider with an accreditation number xxxx.

| Test parameter     | Simulant | Conditions       | Value <sup>1</sup> | Criteria | Compliance <sup>2</sup> |
|--------------------|----------|------------------|--------------------|----------|-------------------------|
| Transfer of odor   | Water    | 10 days at 40 °C | 0.0                | ≤ 2.5    | compliant               |
| Transfer of flavor | Water    | 10 days at 40 °C | 0.0                | ≤ 2.5    | compliant               |

<sup>1</sup> The scale used for the odor and flavor assessment

0 - no noticeable deviation of the odor/flavor

1 - barely noticeable deviation of the odor/flavor (hard to define yet)

2 - weak deviation of the odor/flavor

3 - significant deviation of the odor/flavor

4 - strong deviation of the odor/flavor (this intensity does not determine the probable maximum)

<sup>2</sup> While Regulation (EC) 1935/2004 does not state a clear compliance limit for the test, a score under 2.5 is considered to have no negative effect on organoleptic properties.

## Test results - overall migration

|                             |  |  |  |  |  |

# Test results - specific migration of primary aromatic amines

**Test methods**

Internal method. The migration method was article fill. Preparation of the simulant according to EN 13130-1. The test was performed by an ISO/IEC 17025 accredited external service provider with an accreditation number xxxx.

**Test conditions**

10 days at 60 °C

**Food simulant**

20% ethanol

**Food simulant volume**

500 ml

| Substance                                 | CAS number | Unit <sup>1</sup> | Result | Criteria | Compliance <sup>2</sup> |
|---|------------|-------------------|--------|----------|-------------------------|
| 1,3-Phenylenediamine                      | 108-45-2   | µg/kg             | < 2.0  | ≤ 2      | compliant               |

| Acetaldehyde      | 128 | 75-07-0    | mg/kg             | 20% EtOH | < 0.5  | ≤ 6 (1) <sup>3,7</sup>    | compliant               |

<sup>1</sup> Specific migration results expressed in mg/kg applying the real surface to volume ratio in actual use (volume of 500 ml), acc. to Article 17, p.1 of Reg. (EU) 10/2011.

<sup>2</sup> Commission Regulation (EU) 10/2011 on plastic materials and articles intended for contact with food, as amended (last update Regulation (EU) 2025/351 of 21 February 2025).

<sup>3</sup> Criteria concern only the analyzed compounds. The Group Restriction Number according to Table 2 of Annex I to EU 10/2011 is given in brackets for the substances with group-related specific migration limitation (SML(T)). The migration of other compounds within the group was not taken into account.

<sup>4</sup> Expressed as isophthalic acid.

<sup>5</sup> Expressed as terephthalic acid.

<sup>6</sup> Expressed as ethylene glycol.

<sup>7</sup> Expressed as acetaldehyde.

## Test results - non-intentionally added substances (GC-MS/FID screening)

**Test methods**

GC-MS/FID screening for non-intentionally added substances (NIAS) according to internal method. The migration method was article fill. Preparation of the simulant was made according to EN 13130-1. Test performed by an ISO/IEC 17025 accredited external service provider with an accreditation number xxxx.

In the applied GC-MS/FID screening method, all identified substances were compared with the NIST14 library with a Match Factor (MF) over 80%. The method is semi-quantitative and thus cannot be treated as equivalent to specific migration.

Evaluation of the compliance of the identified substances was performed by the external service provider and Measurlabs' expert.

**Test conditions**

10 days at 60 °C

**Food simulant**

20% ethanol

**Food simulant volume**

500 ml

| Compound                                      | Score | CAS | Unit | Result | Criteria | Compliance |
|---|-------|-----|------|--------|----------|------------|
| No substances detected migrating above 10 ppb | -     | -   | -    | -      | -        | -          |

**Comment**

NIAS compounds above the limit of quantification of 0.01 mg/kg were not detected.
